

GIS Developer

Come work at a rapidly growing engineering firm that is staffed with industry experts, has great benefits, and prides itself on developing our people.

The Company

Planview Utility Services is an engineering firm that provides engineering design, sub-surface investigation and GIS services to telecommunication, gas, electric utilities and the utility industry at large. Our workforce is a mix of veterans of the industry and youthful enthusiastic technical resources. We have pride in our collegial culture and host multiple regular corporate sponsored social activities. Our embrace of the use of technology plays a large part in our success.

The Position

GIS Developer will be required to use their skillsets to contribute and innovate on a variety of projects and programs. The responsibilities can vary from dynamic requirements and projects to consistent programs that require support and development.

This position is an office based position with little to no field work, but the possibility of out of office meetings. The team is a very skillful group and the requirements from everyone shifts according to need.

Responsibilities

- Reports to the GIS Solutions Manager
- Working with daily project loads and dynamic issues or changes to existing programs
- Development of new projects and programs through individual and team efforts
- Work with project coordinators and other technical staff to complete tasks of varying skill levels
- Use of web services, programming, and system configuration experience to assist in GIS program, process, or application deployment and maintenance
- Use of SQL Server, Oracle, Geoserver, Postgres, Javascript, web services, is a potential
- Troubleshooting issues within code or processes as needed
- Dissecting user issues or needs to determine the problem and implement a solution
- Assisting with development of new features for existing applications or new deployments
- Reporting required details such as issues, deviations from the norm, or client and user problems to the program coordinator or other technical staff as needed
- Time management for maintaining workloads and reporting
- Projecting time requirements for all workloads, issues, and development items before and during the lifecycle
- Ongoing innovation and creativity in solving problems or enhancing existing programs and processes

Requirements

- Web services programming and configuration experience
- GIS experience is an asset
- Working knowledge of python, Apache server, Tomcat, and backbonejs webpack
- Technical problem solving experience
