

Network Provisioning Specialist

Come work at a rapidly growing engineering firm that is staffed with industry experts, has great benefits, and prides itself on developing our people.

The Company

Planview Utility Services is an engineering firm that provides engineering design, sub-surface investigation and geographical information related services to telecommunication companies and electric utilities. Our workforce is a mix of veterans of the industry and youthful enthusiastic technical resources. We have pride in our collegial culture and host multiple regular corporate sponsored social activities. Our embrace of the use of technology plays a large part in our success.

The Position

We are currently seeking a qualified Network Provisioning Specialist for our growing business throughout Ontario. This candidate will gather, oversee and design challenging underground and aerial telecommunication projects. This individual will work closely with project coordinators, clients, CAD technicians, engineers and must possess excellent communication skills.

Responsibilities

- Complete designs for telecommunications networks. Design appropriate access network facilities in a timely fashion to meet customer service dates using standard technologies; establish project milestones for service delivery
- Facilitate preparation of work packages to assist outside construction forces in building access facilities (underground and/or aerial structures, installing fiber & copper cables, and related equipment
- Work with all required parties in order to complete pole line design assessments in accordance with local standards
- Analysis of pole lines for required conductor spacing, separation, clearance and physical element strength under ice and wind loading
- Ensure design drawings and calculation packages are complete and ready for review and sealing by a Project Engineer as required
- Develop, create, recommend, design new drawings and standardize it for multi-site application. Include fix/edit in existing drawing to conform to the company's current acceptable design standards
- Quality control for designs and drawings
- Other duties as required

Requirements

- Proficient in AutoCAD
- Completion of related post-secondary education program
- Capacity to adapt to a dynamic and undefined process environment
- Capacity to handle multiple projects and priorities simultaneously
- Leadership, dynamic, initiative, efficiency
- Valid driver's license
